

OCTOBER 19TH // 10AM -- NOON
CLEAN WATER PROJECT
COMMUNITY FORUM

Southampton Village to host a community forum and workshop to discuss the Clean Water Project, and the efforts to create a sewer district in the downtown village business district.

Who: Members of Southampton Village Board & Clean Water Project Committee, Dr. Chris Gobler

What: Presentation and discussion on why a sewer district is needed, what the sewage treatment plant would look like, how it will work, and more to dispel any myths or misconceptions. Community members are encouraged to come and ask questions and engage in the session.

Where: Village Hall Board Room

Why: To engage residents on the project, provide transparency, and solicit feedback. A sewer district is desperately needed to address the persistent pollution of Lake Agawam and other Village waterbodies. A sewer system would strengthen the business district and allow for more restaurants and additional affordable housing options.
